

Clinzor WorkCare

Physiotherapy & Preventive Care Program,
Designed for sedentary workforces.

Presented By :
Team Clinzor

Introduction

The way we work today has changed, but our bodies haven’t adapted to it.

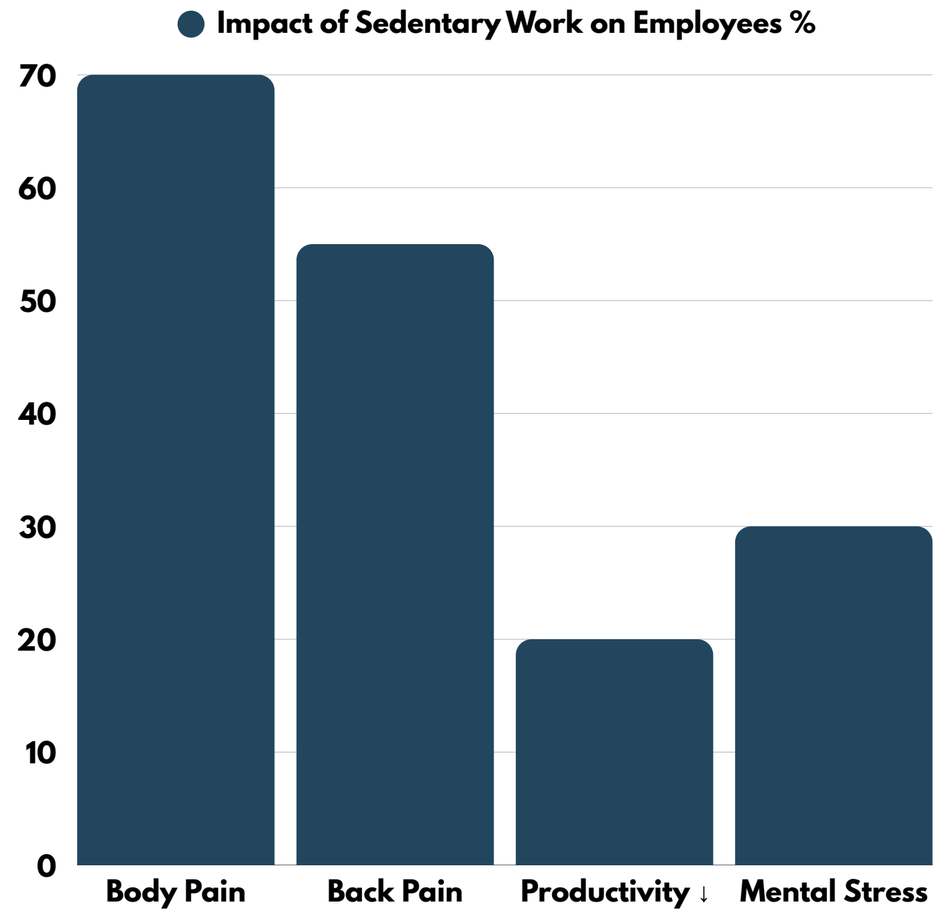

- 8–10 hours of sitting every workday
- Neck, back, and shoulder discomfort becoming common
- Poor posture and non-ergonomic setups
- Pain addressed only when it becomes severe

Presented By :
Team Clinzor

Why This Matters

Sedentary work leads to physical discomfort, reduced focus, and increased mental stress among employees.
Addressing these issues early is essential to protect productivity, engagement, and long-term workplace health.

Team Clinzor

Why Most Wellness Programs Fail

Most wellness programs rely on fixed packages and one-time sessions without proper assessment or personalization. As a result, real employee discomfort often goes unaddressed, limiting long-term impact.

Fixed packages, not personalized care

Most providers offer pre-designed programs instead of understanding workforce needs.

One-time sessions without continuity

Activities like fitness or yoga sessions are conducted once, with no follow-up or progression.

No assessment or pilot validation

Programs are rolled out without evaluating risks or testing what actually works for employees.

Employee discomfort

Without individual evaluation, employees with real pain or posture issues continue to struggle silently.

Our Approach

A Smarter Approach to Workplace Care

Awareness
Educating employees on posture, ergonomics, and early discomfort.

Assessment
Identifying individual and workplace risks through evaluation.

Intervention
Providing targeted physiotherapy and recovery support.

Personalization
Customizing care based on employee needs and work patterns.

Prevention
Reducing injury risk through structured exercise and posture correction.

Continuity
Ensuring long-term impact through ongoing support and monitoring.
